Summary

Full Stack Developer with 2 years on the founding team of a multi-tenant school ERP (SaaS), shipping features end to end in React/TypeScript, Node.js/Express and PostgreSQL, from gathering requirements with school administrators to Dockerized production releases. Seeking a Full Stack or Backend Engineer role with ownership from database schema to UI.

Education

B.Tech in Artificial Intelligence and Machine Learning 2021 – 2025
Sri Venkateswara College of Engineering and Technology, Srikakulam (JNTUGV) *CGPA: 8.17/10 | First Class*

- **JNTUGV Gold Medalist (AIML):** highest academic performance in the AIML branch across all JNTUGV-affiliated colleges (2021–2025 batch), awarded at the university's first convocation, July 2026.

Experience

Full Stack Developer (Founding Team) Sept 2024 – Present
maahita technologies *Remote*

- One of the founding engineers; owned a large part of the core implementation of the company's multi-tenant school ERP, from requirements to React/TypeScript UI, Node.js/Express APIs and PostgreSQL.
- Implemented core business logic across 15+ ERP modules (admissions, timetable, marks, fees, subscriptions) in a REST API that grew to 570 endpoints, taking each module from requirement to release.
- Built authentication and role-based access control for four roles, and a Razorpay webhook-driven subscription lifecycle (trial, grace period, upgrade) that updates each school's plan from payment events.
- Fixed a fee-waiver bug that split waivers by ratio across a term group (an INR 99.84 mismatch) with charges-first allocation, and added immutable JSONB receipt snapshots so issued receipts never change.
- Demoed the product at schools, gathered requirements and joined negotiations and follow-ups, helping onboard two pilot schools; shipped their feedback as product changes.
- Tested in QA and production with a senior QA engineer, wrote Vitest unit and Playwright E2E tests (680+ test files across two repos) and fixed production issues during the pilots.
- Owned production releases on Docker and Nginx (DigitalOcean) via GitHub Actions, gated by tests and a schema-drift check.

Projects

maahita School ERP: Multi-Tenant Data Layer | *PostgreSQL, Node.js/Express, Docker* 2024 – Present

- **Problem:** schools needed one shared platform with isolated data, which single-tenant Firebase could not provide.
- **Built:** helped migrate to schema-per-tenant PostgreSQL behind an Adapter/Repository layer, with the tenant search path set per connection and 240+ versioned migrations with paired rollbacks.
- **Result:** every school's data is isolated in its own schema, and a CI drift check blocks out-of-sync deploys.

Vinodam: Live Quiz Platform | *React, Firebase, real-time sync* 2026

- **Problem:** a school principal needed a TV-quiz-show style platform for a student event, within a few weeks.
- **Built:** an admin console, projector view and student phone screen synced in real time (rounds, timers, scoring, live leaderboards, join by event code). Built v1 solo; the team hardened it into a maahita product.
- **Result:** ran live with about 300 students for hours without a failure; the principal awarded the team INR 5,000.

Technical Skills

Languages: JavaScript, TypeScript, SQL, Python, HTML, CSS
Frontend: React, React Router, Vite, Tailwind CSS | **Backend:** Node.js, Express.js, REST APIs, JWT
Database: PostgreSQL (JSONB, migrations, multi-tenancy), Firebase | **Auth/Payments:** Firebase Auth, Razorpay
DevOps/Testing: Docker, Nginx, GitHub Actions, DigitalOcean, Git, Vitest, Playwright
Practices: Design patterns (Adapter, Factory, Repository), spec-first design, Agile (Jira), client demos
